

4X8' SECTION OF A 2-SECTION STAGE

NOTE 1. The plastic buckets can be deformed to snap into the retainers, and several buckets may be stacked to add height to the stage.

NOTE 2. A 10' by 8' carpet can be used to hold the stage sections together instead of the bolts. The carpet ends should hang over the front edge of the stage (bottom of this drawing) to hide the buckets and to firmly hold the two sections together.

NOTE 3. The stage is somewhat compliant so that it can be satisfactorily used on a somewhat uneven parking lot surface.

NOTE 4. The stage is designed for compact storage if the buckets can be nested.

BILL OF MATERIALS

- 2 - 4X8, 3/4" Plywood sheets (Lowest grade)
- 10 - 1x2, 8' Pine Boards
- 1 - Box of 1.25" Deck Screws
